

```
public class Main extends Thread
{
    String task;

    Main(String task)
    {
        this.task = task;
    }

    public void run()
    {
        for(int i = 1; i <= 5; i++)
        {
            System.out.println(task);

        } }

    public static void main(String[] args)
    {
        Main th1 = new Main("hello india");
        th1.start();
    }
}
```
